

## Mobil-Mark accessories

### Practical solutions for precise, convenient laser engraving

A good laser engraving system, in combination with useful accessories, can perfect the process of laser-marking components while significantly lightening your workload. For many years, Mobil-Mark has been developing unique, customised solutions for special requirements. These practical tools for everyday use have expanded to become a comprehensive range of accessories. We are confident that we have something to meet every need – and if we don't have it, we'll develop it!

### Marking bench

For stationary laser marking at a workstation that might also need to be mobile, we recommend the marking bench.

- > Slotted plate with clamp for component positioning
- > Manual or automated laser head guidance (optional)
- > Additional storage space

### Extraction and filter units

For extracting harmful gases during the laser marking process.

- > Two versions available (laser engraving on metal/on plastic)
- > High filter capacity

## Touch panel

The touch panel enables you to conveniently and efficiently configure each marking or labelling process directly on the laser engraving machine.

- › Convenient for engraving that changes frequently
- › Direct connection to laser PC

## Barcode reader

If you need to laser-engrave predefined labelling layouts with constantly changing content in a short time, the barcode reader from Mobil-Mark is the ideal solution.

- › Rapid input of any job
- › Simple installation

## Laser head holder

For an ergonomic workstation that is easy on your back – particularly in large-batch production – the laser head holder keeps the hand-held laser engraving device suspended in the air.

- › Makes manual laser engraving easier
- › Easy to mount
- › Makes manual laser engraving faster

## Laser handling system

Mobil-Mark offers a customised handling system for optimum positioning of the engraving laser. It makes handling the laser much easier, and minimises any potential mounting errors in manual operation that could lead to a loss of marking quality.

- › Maximum flexibility
- › Articulated arm handling system with slots for laser head
- › Precise positioning

## World-class laser marking systems – made in Germany

Mobil-Mark offers the full range of products, accessories and services that discerning companies expect. Every individual customer request is both a challenge and a motivation for us – and we always find the ideal solution.
